

# 1) Flat File Source module

## Define the source metadata using Flat Files

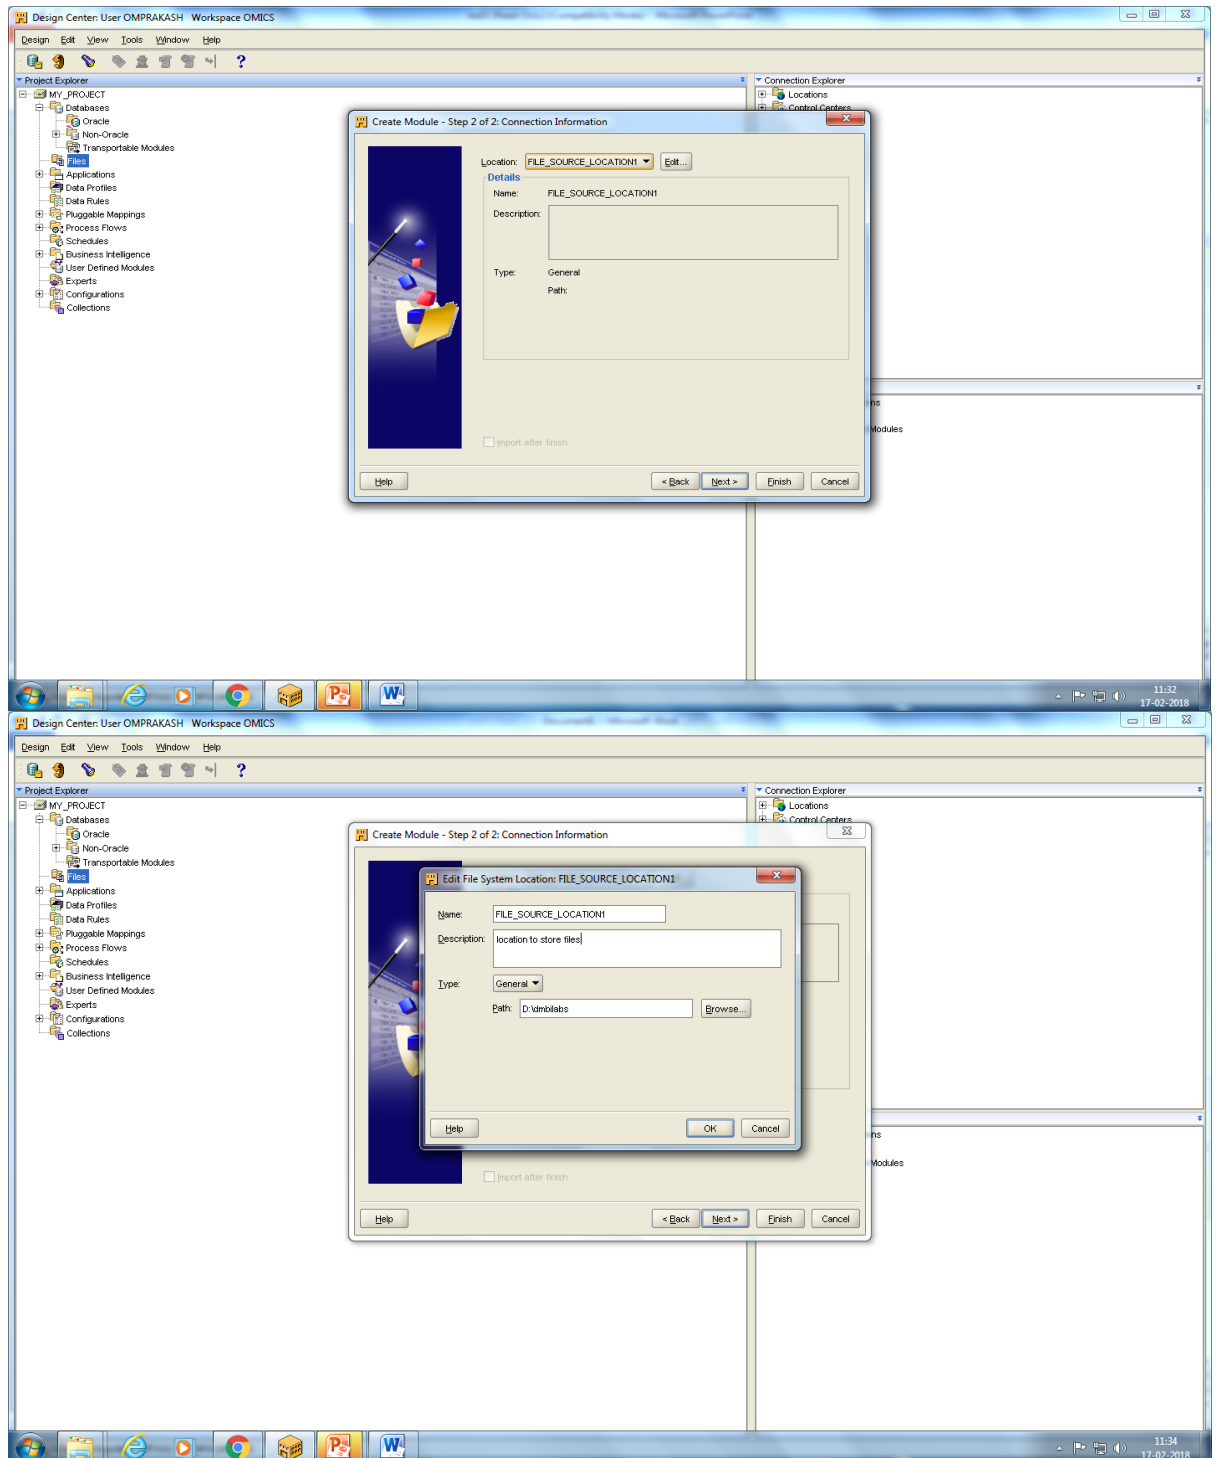

Create the source module and import the metadata. In the case of flat files, importing involves sampling of the flat file

### 1) Creating a flat file source module

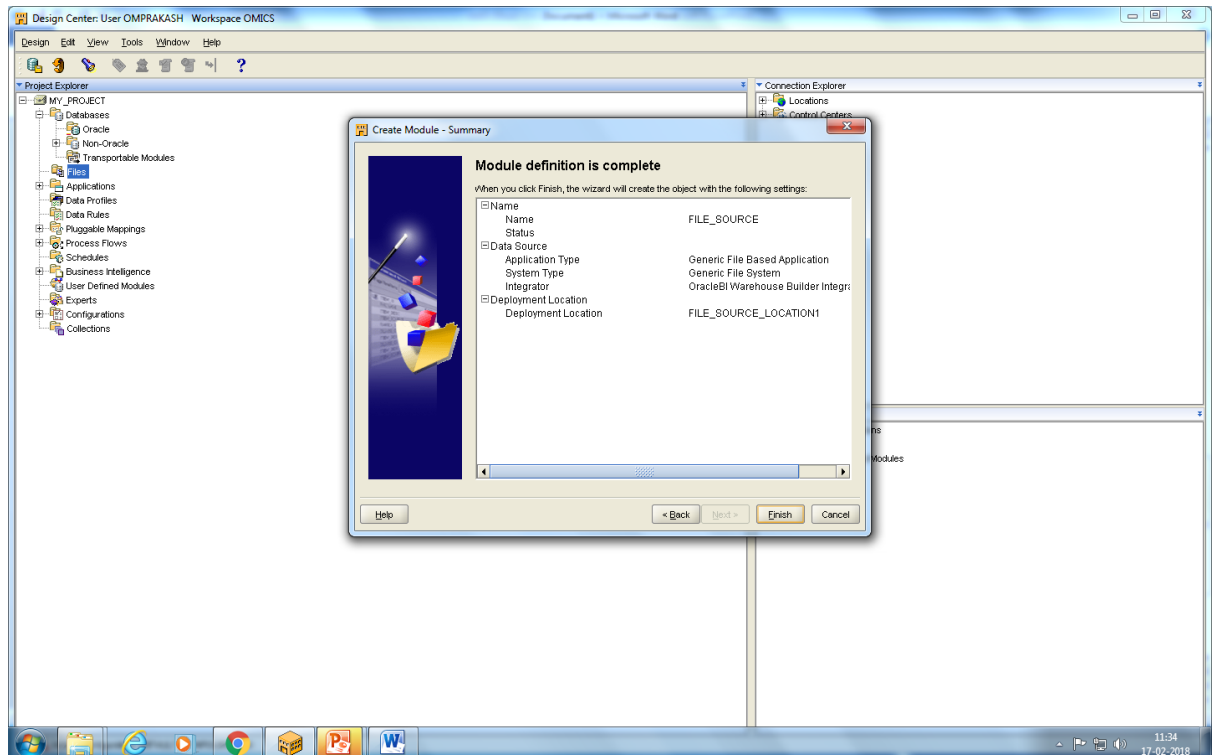

### 2) Specify the location for flat file

# 1) Flat File Source module

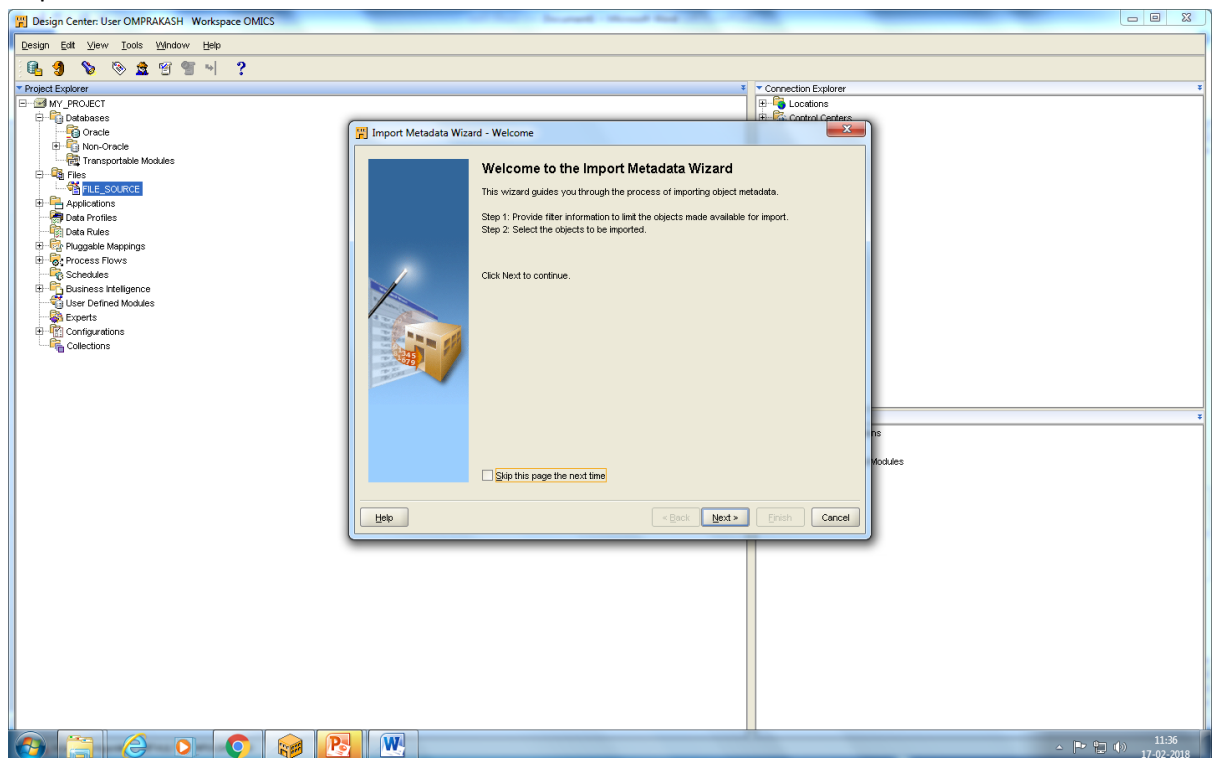

# 1) Flat File Source module

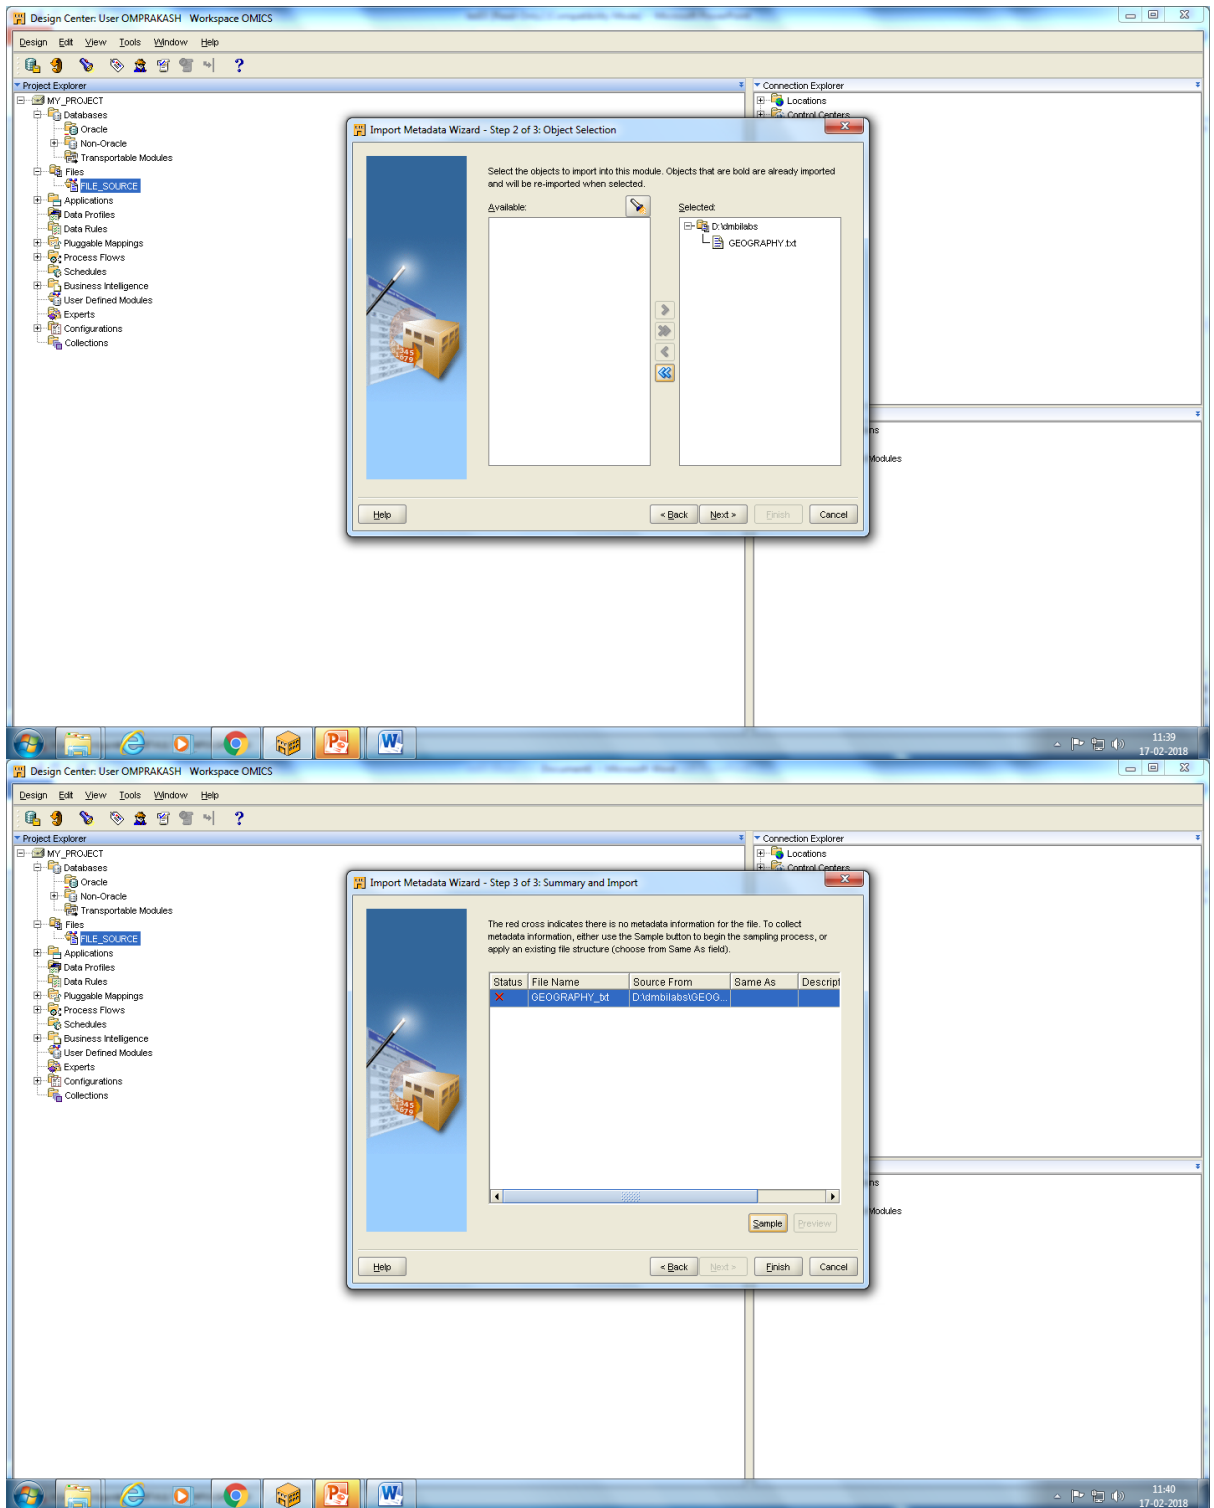

The Summary page summarizes the information you provided on each of the wizard pages.

The wizard creates the flat file module and inserts the module name in the Project Explorer under the Files node and proceeds to importing the metadata by using the Import Metadata Wizard.

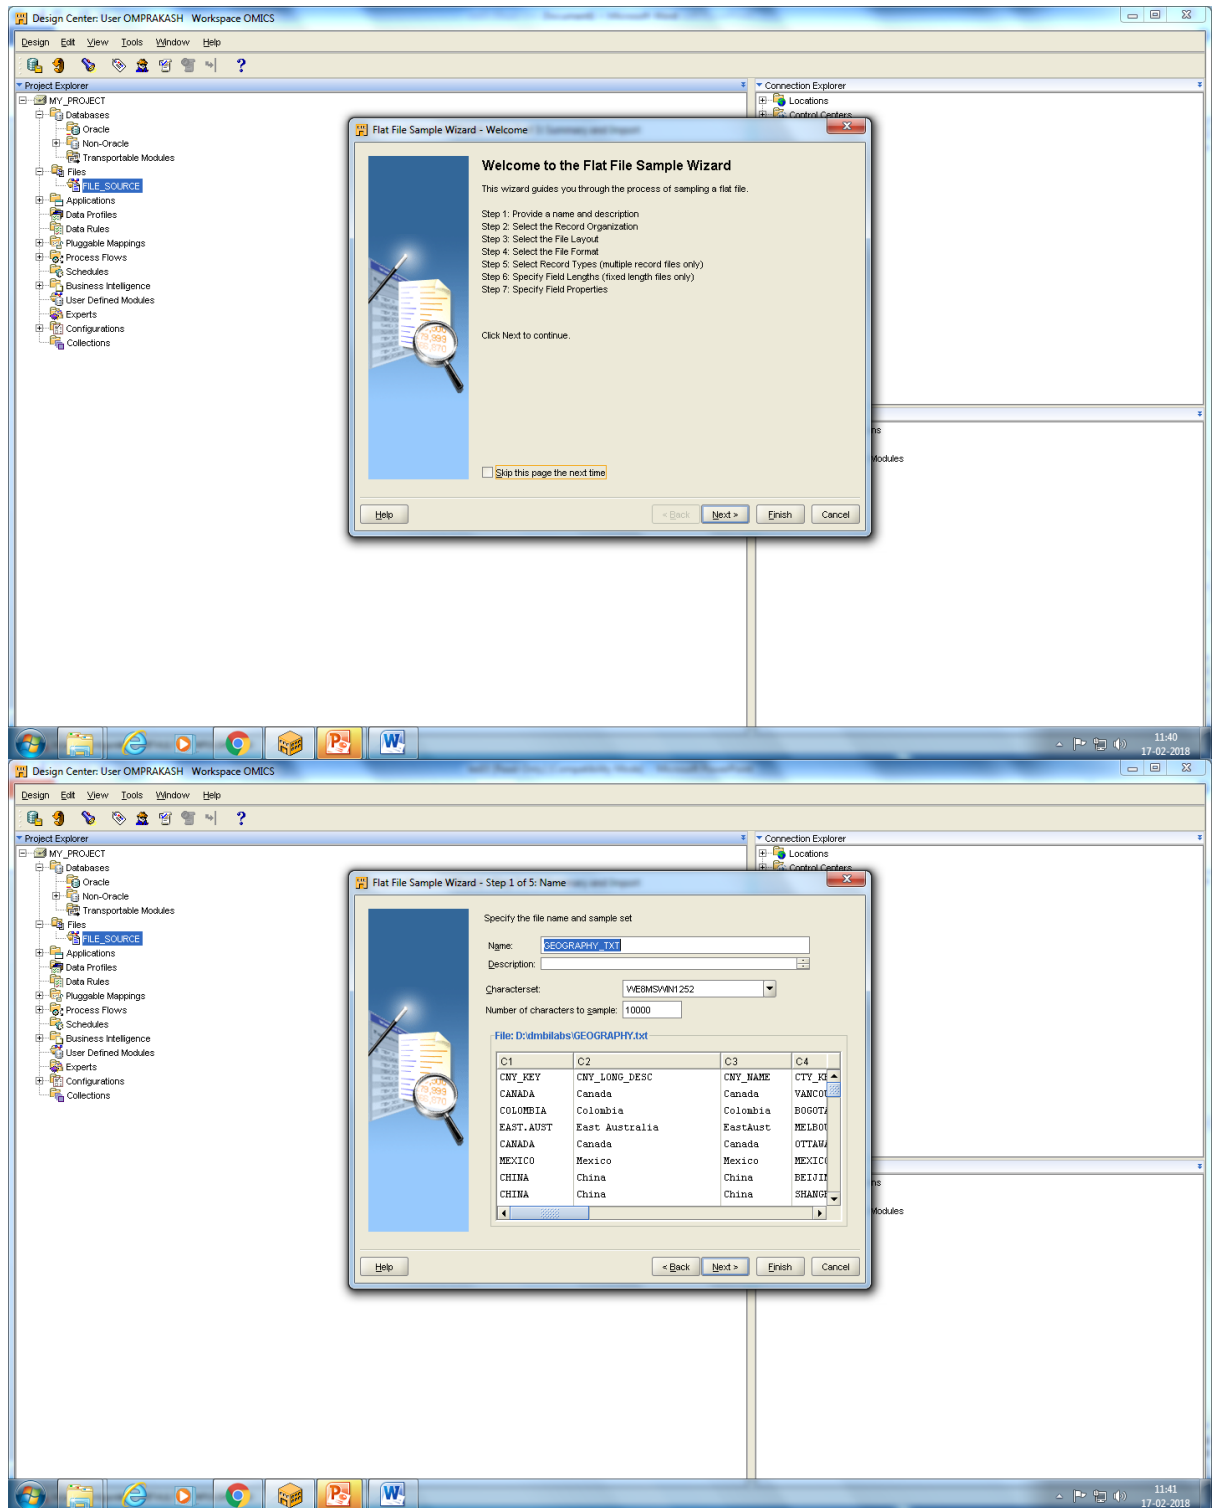

## 3) Import the metadata
